

ANTI-WRINKLE INJECTIONS

Lines and wrinkles around the face develop over time and cause us to look older than we feel. Our Botox injections reduce these lines to keep you looking young and wrinkle-free.

Our Botox injections relax the contraction of muscles so that wrinkles relax and soften. This procedure does not require anaesthetic and takes just a few minutes to perform.

At consultation we will discuss with you any relevant medical history, try to ascertain your expectations, determine your suitability for treatment and then discuss possible treatment options for you to consider.

Dr Saleh will explain the treatment processes and any possible risks and complications and provide you with post-treatment advice.

Following Your Treatment

Some patients experience bruising around the site of treatment. This will usually settle within a day or two. It usually takes four to ten days to see the full effect. The results are not permanent and the duration will differ from patient to patient.

Very rarely, the following may happen:

- Frontal headache lasting 48 hours
- Asymmetry of any facial expression
- Drooping of the eyebrow or, even more rarely, the eyelid

We advise that you do not have a professional massaging facial for two weeks following Botox treatment as this may interfere with the result.

If you experience any problems or concerns, please contact the clinic.

We would be pleased to review your treatment after 14 days should you feel that this is necessary.

We hope that you are happy with your treatment.

Please remember that the treatment will only last approximately 3 months and, therefore, it is advisable to make a further appointment after that time.
