

# MICRODERMABRASION

**Medical Microdermabrasion is an excellent treatment that makes skin look younger, softer and more radiant. It cleans the pores and stimulates new collagen growth and its effects are immediate.**

Microdermabrasion treatment is an advanced form of exfoliation. Exfoliation means removing the most superficial layer of skin, which is ordinarily composed of dead skin cells.

Everybody has dead cells on their top layer of facial and body skin. The body continuously replaces these dead cells by producing new skin cells.

Microdermabrasion treatment speeds up this renewal by removing more dead skin cells in a shorter period of time. This encourages the faster production of more fresh skin cells. In practical terms, this means fresher and more healthy looking skin.

If the treatment is repeated several times, the continual regeneration of fresh skin cells helps to eliminate lines and reduces wrinkles.

This painless process uses a similar principle to sandblasting. Fine crystals are directed at the skin through a high-pressure jet and removed by a vacuum process.

The treatment is gradual and the effects are progressive with each session. It is combined with collagen-stimulating products to achieve the best possible results.

Microdermabrasion is an increasingly popular skin treatment for a variety of conditions. It treats a wide range of skin problems quickly, painlessly and without any post-treatment downtime. This rapid recovery means that you can have the treatment in your lunch hour and return to work in the afternoon.

## The Treatment

Microdermabrasion is a non-chemical, non-invasive procedure that uses a spray of microcrystals to remove the outermost layer of dry, dead skin cells and reveal younger, healthier-looking skin.

It also encourages the production of a new underlying layer of skin cells with higher levels of collagen and elastin, which further improves your skin's appearance.

Microdermabrasion is most commonly used to treat the following skin conditions:

- Acne Scars
- Age Spots
- Enlarged Pores
- Wrinkles
